

CLOUD AUDIT & COMPLIANCE

COURSE CODE: SEC-305

COURSE DETAILS

Focusing on how to audit, control, monitor and assess new cloud-based IT and business systems has never been more important as more and more organizations are facing foreign cloud computing challenges when trying to assess vulnerabilities, reporting on compliance issues and establishing internal controls.

Cloud Audit & Compliance is a two-day course reviewing how to effectively and appropriately assess cloud computing services and providers. Not only that, but Cloud Audit and Compliance training will also help identify how an enterprise and its people can assess their own readiness to adopt cloud computing, along with the ability to monitor the usage of a cloud service once implemented.

STUDENT TESTIMONIAL

“Cloud Audit and Compliance was great, far better than I had originally anticipated. The course material was highly practical and informative, while the instructor added tremendous value to the training by consistently linking the material to the experiences he gained from past consulting projects.”

- Sandra Henry-Stocker
