

CLOUD SECURITY FUNDAMENTALS

COURSE CODE: SEC-331

COURSE DETAILS

Cloud Security Fundamentals is the ideal entry-point for professionals and enterprises interested in enhancing their understanding of cloud security. You will learn about the relationship between cloud computing and cloud security, while also discovering a number of best practices commonly utilized by companies who are actively assessing cloud technologies.

Additionally, you will learn to analyze governance challenges in the cloud, ranging from jurisdictional issues, vendor selection and assessing the outsourcing chain through investigating the various compliance standards often used by cloud service providers. Cloud Security Fundamentals will finish-up with a high-level discussion about the available technologies and tools available to streamline IT and address security issues with cloud computing.
