

# CSX PRACTITIONER BOOT CAMP

CSXP | COURSE CODE: SEC-330

## COURSE DETAILS

The CSX Practitioner (CSXP) Boot Camp is a 5-day, immersive cyber security training course designed to help you build critical technical skills by learning complex concepts and practice applying industry-leading methods. This ISACA authorized CSXP Boot Camp is conducted in a live, lab-based network environment – not a simulated environment like other courses. Students will go through complex cyber security scenarios based on recent, real-world scenarios and be given live incidents to detect and mitigate. Aligned with global cyber security frameworks.

CSX Practitioner training consists of at least 50% hands-on lab exercise, combined with instruction on key cyber security concepts. Each day of training represents a new lesson, focused on skills and concepts in one of five areas: (1) Identify, (2) Protect, (3) Detect, (4) Respond and (5) Recover.

## COURSE BREAKDOWN

This ISACA authorized CSX Practitioner training seminar is based on the five domains featured in the CSXP certification program, ensuring students successfully prepare for the exam while also enhancing their overall competencies in cyber security.

DOMAIN 1 Identify

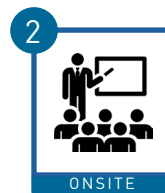

DOMAIN 4 Respond

DOMAIN 2 Protect

DOMAIN 5 Recover

DOMAIN 3 Detect

## COURSE FEATURES

Professionals who register for Intrinsec's CSX Practitioner BootCamp course are provided with an unmatched number of benefits designed to maximize their cyber security training experience. The following features are included with all CSX Practitioner BootCamp registrations:

- 5 Days of CSX Practitioner Training from an Authorized ISACA Instructor
- ISACA Issued CSX Practitioner Training Courseware / Review Manual
- 6-Month Subscription to ISACA's Corresponding CSX Labs
- 1 CSX Practitioner Exam Voucher

## INTENDED AUDIENCE

The CSX Practitioner course is intended for professionals with roles focusing on cyber security – with a minimum of one to five years of experience. Students who register for this course should be proficient in the following areas:

- Network Scanning
- Specialized Port Scans
- Network Topologies
- Network Log Analysis
- Centralized Monitoring
- Hotfix Distribution
- Vulnerability Scanning
- Traffic Monitoring
- Compromise Indicators
- False Positive Identification
- Packet Analysis
- Used Account Controls
