

CSX PRACTITIONER 2 DETECTION

CSXP | COURSE CODE: SEC-328

COURSE DETAILS

ISACA's Cybersecurity Nexus (CSX) certification program supports cybersecurity professionals throughout their career by assessing a candidate's abilities and skills at three progressive technical skill levels. Levels are differentiated by skills, not by years of experience. Each technical skill level is assessed utilizing a vendor-neutral set of performance-based exams measuring a candidate's technical skills, abilities and performance in the following areas: Identify, Protect, Detect, Respond, and Recover.

This official CSX Practitioner 2 course reviews the "Detect" domain. Students will learn the basic concepts, methods and tools used to leverage cyber security controls to identify system events and non-event level incidents. In layman's terms, CSX Practitioner 2 will help students develop the ability to serve as a first responder, following established procedures, defined processes and working mostly with known problems on a single system.

COURSE FEATURES

Professionals who register for Intrinsec's CSX Practitioner course are provided with an unmatched number of benefits designed to maximize their cyber security training experience. The following features are included with all CSX Practitioner registrations:

- Five Days of ISACA Training from an Authorized CSX Practitioner Instructor
- Official ISACA Courseware for CSX Practitioner 2: Detection
- Official ISACA Study Guide for CSX Practitioner 2: Detection
- Six Month Subscription to ISACA's Official OnDemand Labs for CSX Practitioner 2: Detection
