

CSX PRACTITIONER 3 RESPOND AND RECOVER

CSXP | COURSE CODE: SEC-329

COURSE DETAILS

ISACA's Cybersecurity Nexus (CSX) certification program supports cybersecurity professionals throughout their career by assessing a candidate's abilities and skills at three progressive technical skill levels. Levels are differentiated by skills, not by years of experience. Each technical skill level is assessed utilizing a vendor-neutral set of performance-based exams measuring a candidate's technical skills, abilities and performance in the following areas: Identify, Protect, Detect, Respond, and Recover.

CSX Practitioner 3 training from Intrinsec reviews both the "Respond" and "Recover" domains. With course lecture reinforced with lab sequences, students will learn how to apply a professional methodology to respond and recover from network incidents or disasters. Not only that, but students will discover how to contain an event and protect assets and infrastructure, and learn the components and procedures required for a comprehensive incident response plan.

COURSE FEATURES

Professionals who register for Intrinsec's CSX Practitioner course are provided with an unmatched number of benefits designed to maximize their cyber security training experience. The following features are included with all CSX Practitioner registrations:

- Five Days of ISACA Training from an Authorized CSX Practitioner 3 Instructor
- Official ISACA Courseware for CSXP 3: Respond and Recover
- Official ISACA Study Guide for CSXP 3: Respond and Recover
- Six Month Subscription to ISACA's Official OnDemand Labs for CSXP 3: Respond and Recover
